

Muhammad Dawood Imran

AI Engineer

+92-3060446517 | m.dawoodimran01@gmail.com | [linkedin.com/dawood](https://www.linkedin.com/in/dawood) | [github/dawood](https://github.com/dawood)

SUMMARY

AI Engineer interested in building practical and reliable AI applications that solve real-world problems. Experienced in working on LLM-based systems, backend integrations, and intelligent workflows, with a strong focus on turning ideas into functional products through experimentation, iteration, and engineering. Committed to continuous learning and growing through practical, real-world engineering experience.

EDUCATION

COMSATS Institute of Information Technology

Bachelor of Science in Software Engineering; CGPA: 3.52/4.00

Lahore

Sep. 2021 – Jul. 2025

Punjab College

Intermediate; Percentage: 90%

Faisalabad

Aug. 2019 – May 2021

EXPERIENCE

Tkxel

Associate Software Engineer – AI Systems

Sep. 2025 – Present

Lahore

- Building and deploying LLM-based agents using Python and LangGraph, focusing on workflow orchestration, state handling, and applied AI use cases.
- Developing end-to-end machine learning workflows including data preprocessing, feature engineering, model training, evaluation, and backend integration.
- Integrating AI components with backend services to support production-oriented machine learning and LLM-powered applications.
- Working with retrieval, prompt design, and model evaluation practices to improve reliability and relevance of AI system outputs.

Tkxel

Engineering Intern – Rotational Program

Jul. 2025 – Aug. 2025

Lahore

- Completed cross-functional rotations across business, development, design, QA, security, and DevOps within the software engineering lifecycle.
- Built Generative AI chatbots during the development rotation using **LangGraph**, focusing on LLM orchestration and applied AI workflows.

TECHNICAL SKILLS

Programming: Python, SQL, TypeScript, JavaScript, R, C, C++

AI / Machine Learning: Machine Learning, NLP, scikit-learn, Pandas, NumPy, feature engineering, model evaluation

LLM / Agent Engineering: LangChain, LangGraph, RAG, Prompt Engineering, Context Engineering, Vector DBs

Backend / Data: FastAPI, SQLite, PostgreSQL, Supabase, REST APIs, Streamlit

Automation / Integrations: n8n, CrewAI, workflow automation

Frontend / Tools: React, Git, Docker, Claude Code, Codex

Bella – Real-time AI Voice Ordering Assistant | *Python, LiveKit Agents, OpenAI GPT-4o-mini, ChromaDB*

- Developed a real-time AI voice ordering assistant for Bella Pizza Co., enabling callers to browse menus, place pickup and delivery orders, check order status, ask allergen questions, and escalate to a human.
- Built a low-latency voice AI pipeline using Deepgram STT, OpenAI GPT-4o-mini, Cartesia TTS, Silero VAD, multilingual turn detection, and AI noise cancellation.
- Implemented tool-augmented workflows with function calling for menu search, order management, location lookup, business hours, knowledge-base retrieval, and human handoff, backed by SQLite and ChromaDB RAG.

InquireAI – PDF Question Answering Chatbot | *Python, FastAPI, LangChain, Faiss, Streamlit*

- Built a RAG-based document QA system using PDF ingestion, text chunking, vector embeddings, ChromaDB similarity search, and LLM-based response generation.
- Developed FastAPI services and a Streamlit interface to enable context-aware querying over uploaded PDF documents.
- Improved answer relevance by retrieving document-specific context before generation instead of relying only on direct LLM prompting.

AgroBoost – Smart Agriculture Platform | *Python, Machine Learning, Remote Sensing, NLP, React Native*

- Built and curated a satellite-based agricultural dataset, engineered vegetation and weather features, and trained ML models for crop yield prediction.
- Developed a multilingual AI chatbot for crop guidance and integrated expert–farmer chat to support data-driven farming decisions.
- Implemented a marketplace concept where buyers bid on predicted yields while farmers earn and convert platform-based reward coins.

NovaMart – E-commerce Automation Suite | *n8n, Next.js, Supabase, PostgreSQL, OpenAI, Gmail, Slack*

- Built an end-to-end e-commerce automation system where storefront actions triggered n8n workflows for order processing, inventory monitoring, and customer support routing.
- Connected a Next.js storefront with Supabase, Gmail, and Slack to automate order creation, confirmation emails, fulfillment alerts, and status updates.
- Designed AI-assisted support and inventory workflows for request classification, order-detail extraction, urgency scoring, low-stock detection, Slack alerts, and operational follow-ups.
